

## My Career Summary

Like most academics, I also strongly focus to research publications. However, I have many other skills, talents and perseverance, which make me want to go beyond the limits of modern scholars. I hope you can see it from the following **career summary**:

### State-of-the-art Research in AI

- I published at many top AI conferences, including AAAI, IJCAI, ECAI, ECCV, AI-STATS and ICDM, as well as many prestigious IEEE Transactions: IEEE-(T-NNLS, T-Image Processing, T-Signal Processing, T-KDE, T-Mobile Computing and T-Cybernetics). I have co-authored with many world-leading scholars, including:
  - Chair Prof Arnaud Doucet of Oxford University & DeepMind
  - Prof Zoubin Ghahmami of Cambridge University & Chief Scientist of Uber, and
  - Prof Yike Guo of Imperial College of London & Fellow of the Royal Academy of Engineering.

### Machine learning research MOOCs

- Since 2012, I have been writing one of the most popular A.I. and machine learning research MOOCs in the world. My MOOCs has more than **2,000** slides and covers the full spectrum of A.I. in **46** separate topics. Its popularity can be demonstrated by the **5000** GitHub Stars. In addition, I also created a Mandarin-speaking machine learning video lecture series, which has more than **30,000+** fans/subscribers worldwide across various platforms since October 2015.

### Leadership experience

I have experienced in different aspects of academic leadership:

- 2008 – 2009: whilst I was a lecturer at CSU, I led a large research team funded by Newcrest Mining, this successful team was comprised of senior lecturer and associate professors.
- 2012 – 2015: whilst I was a senior lecturer at UTS, I was the Deputy Head of School (Teaching and Research), School of Computing and Communication (now School of Electrical and Data Engineering) to manage the school's daily operations and strategies for its fifty staff members.
- Since 2015: I am currently the Director of Machine Learning and Data Analytics Lab at GBDTC, UTS. I have established a sizeable external-engagement team in A.I. and data science research. I created this team from scratch. Currently, the team has expanded to **26** members, almost entirely funded by industry. The team is composed of scholars, postdoctoral fellows, doctoral students, talented engineers and publicists.

### Industry engagement

- My team have engaged in industry contract research in finance, government, transportation, utilities, e-commerce, legal, defense and agriculture sectors. Since late 2015, I have attracted **14** industry partners to fund more than **22** independent projects.

- I also founded an executive training team, specialized in running **bespoke A.I. courses for corporates** that have generated significant revenue and developed many new industry partners through it.
- I also consulted for several Australian companies.

### Community Building

- I have represented Standards Australia for ISO JTC 1/SC42 (Artificial Intelligence) standardizations meetings since 2018.
- I have established one of Australia's largest AI-centric meetup group with more than **4,400** members and an industry host network.
- I engage and mentor several Australian startups.

### Engineering Skill

Despite being a leader, I am an excellent engineer too. I also set an example in practical/engineering/competition skills to motivate my team members:

- I singlehandedly created a real-time computer vision lab at Charles Sturt University (CSU). The lab has many impressive working demos. I modernized it with Deep Learning technologies at UTS.
- I competed and won the NSW Data Analytics Hackethorn in 2015 all by himself.
- My postdoc and I led a UTS team and won the IEEE Conference of Games (CoG) microRTS 2019 competition by a large margin

### Teaching

- I firmly believe that most outstanding researchers are also outstanding teachers. Because being able to show off the knowledge will motivate scholars to excel in teaching and research alike. Needless to say, I am an excellent teacher from teaching undergraduates to PhD students.
